

Carolina Native Nursery: Nursery Manager

Carolina Native Nursery, in the mountains of western N.C., is an industry leader in the production and sales of regionally native shrubs, perennials, ferns, grasses, and a few selected trees throughout the eastern U.S. Due to our growth and expansion; we are currently searching for the right individual to join our team. We are a dynamic, progressive, and innovative organization and will maintain that mindset as we continue our mission of growing beautiful, garden center quality native plants for our expanding clientele. You will have the opportunity to take the knowledge you have and couple that with what we know from growing these plants for over a decade to make us a better nursery.

Overall review of responsibilities:

Carolina Native Nursery's nursery manager will be an integral part of our outstanding team. Because of the growth our company is experiencing, finding the right person looking for a position who is looking for autonomy, responsibility, and the opportunity to find a home in western N.C. is essential.

Our manager will help determine optimal growing conditions for our plants. Being an integral part of the decisions about when to propagate, plant, fertilize, harvest, and sell could be the responsibility of Carolina Native's grower. Because weather conditions greatly affect the success of plant growth, our grower must carefully monitor weather patterns and take proper precautions to ensure the plants are not distressed by unfavorable weather conditions. They examine plants for diseases, insects, wildlife damage, and weeds to protect the health of the plants.

In other words: Grow Great Plants
